**Worktribe.**<sup>TM</sup>

**Worktribe** is a fully integrated Enterprise Information Management suite, employing advanced Web 2.0 features for real-time information sharing, workflow and collaboration.

Powerful and extremely easy to use, **Worktribe** is used by over 1000 organisations worldwide, including FTSE 100 companies, government departments, councils and police forces.

**Worktribe.**<sup>TM</sup> **increases efficiency and streamlines workflow, ensuring a smooth transition from historical paper-based systems to a fully electronic paperless solution.**

EDGE

## Worktribe.™

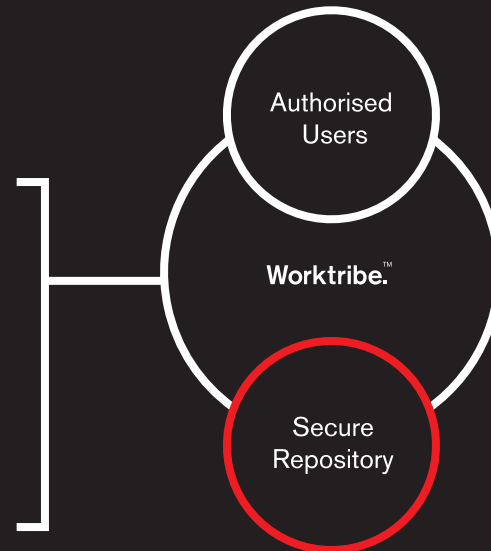

Worktribe is a dynamic, multi-user, multi-agency system for secure information sharing and collaboration via web and mobile devices.

Enterprise features include management of records, cases, documents and assets, with search, reporting, workflow, metadata, annotation, version control, audit, archive and records retention. Access to view and modify data is tightly controlled and logged with a powerful and intuitive granular permissions system.

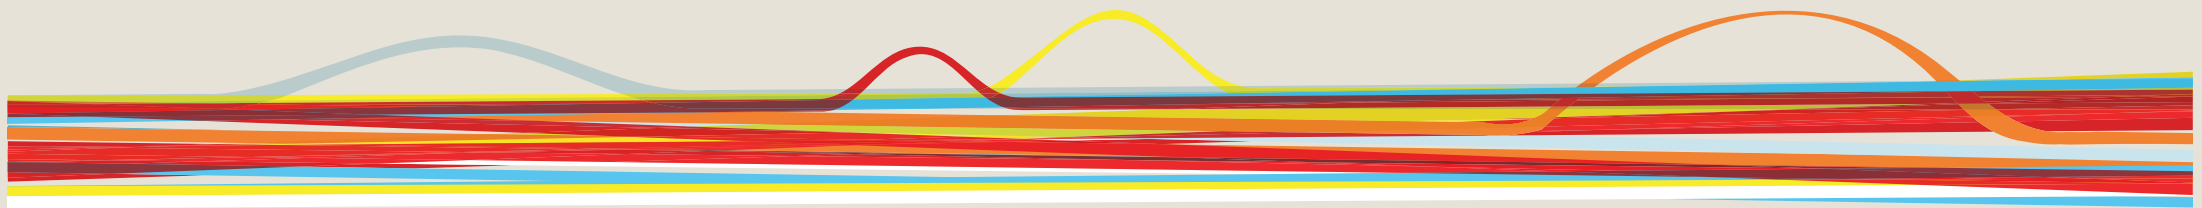

Fully integrated workflow provides briefing, tasking and debriefing, with easily configurable workflow templates driving and monitoring key business processes.

# EFFICIENCY

## Worktribe.™

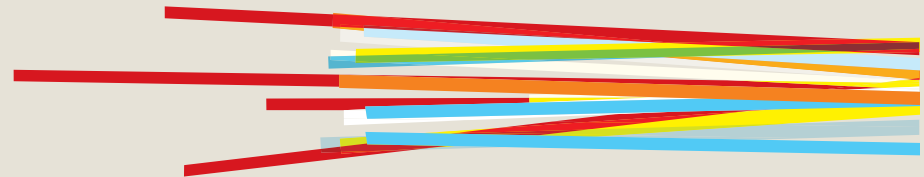

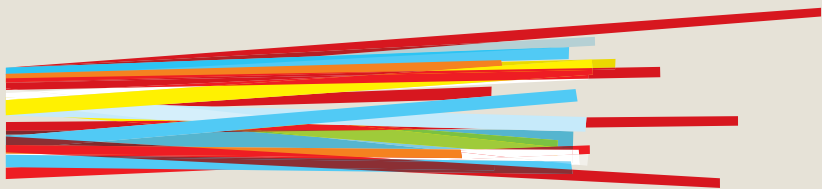

Worktribe is highly intuitive, requiring no specialist technical expertise. Easily navigable, Worktribe provides a personalised experience for each user highlighting recent activity among their colleagues and actions required.

Web 2.0 features make it a pleasure to use - real-time data validation, context-sensitive help, duplicate detection, automatic formatting, cross-referencing, and WYSIWYG Word-style editing.

Comprehensive search and reporting facilities make it straightforward to create custom searches and reports, locating and filtering data across a wide range of configurable criteria. Reports can be automatically produced and distributed on a schedule.

# REACH

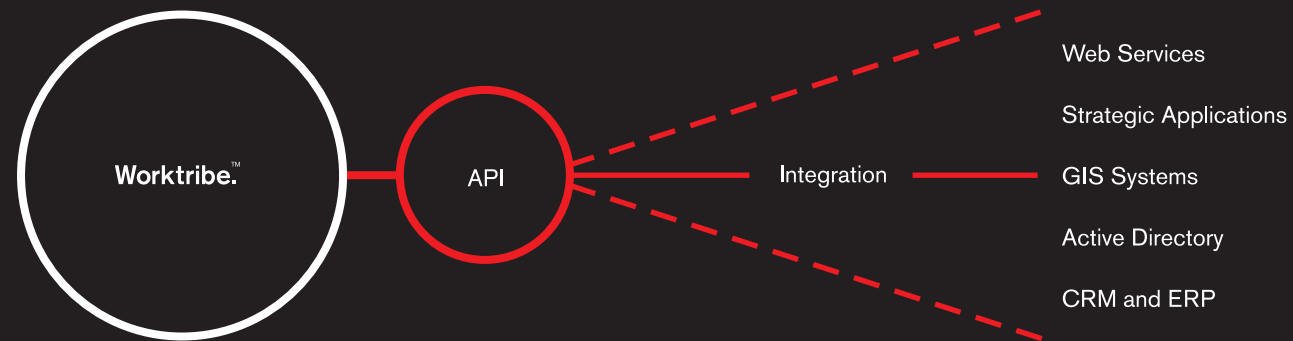

## Worktribe.™

Worktribe provides automated audit and Records Retention and Disposal (RRD) facilities in line with Data Protection and other legislative requirements and best practice.

Worktribe supports the full .Net framework, Virtualisation, GIS and Active Directory, and includes an XML Web Services API for open standards interoperability, import and export. It is a secure and resilient application that can scale from a single server solution to support vast content repositories in a clustered server environment.

Concurrent-user licensing ensures that all authorised parties can access the system as necessary without the administrative burden of individual user licences.
